

LenTrust - Product Requirement Document (PRD)

1. Product Overview

LenTrust is a peer-to-peer lending accountability app. It helps people lend and borrow money with confidence by creating digital contracts, sending automatic repayment reminders, and maintaining a Trust Score (Reliability Stars) based on repayment history.

2. Key Roles

- Borrower: Requests money by creating a contract.
- Lender: Reviews requests, accepts/rejects, tracks repayment, and rates borrowers.

3. Core User Flows

Borrower Flow:

1. Create Contract

- Input: Amount ($\geq$ Rs.100), Due Date & Time ($\geq$ 48h, $\leq$ 90 days), Lender Phone, Reason (optional).
- On submit: contract created with status = REQUESTED.

2. View Active/Due Contracts

3. Ask for Time (Extension) - Max 3 extensions per contract, after 3rd borrower sees Final Extension banner.

4. Settle Up - Upload repayment proof, contract marked as SETTLE_PENDING.

Lender Flow:

1. Loan Requests - Sees borrower request card with Reliability Stars, amount, due date, reason, and pinned reviews.

- Actions: Accept (with proof), Counter-offer, Reject.

2. Active Contracts - Approve/Deny extension, Approve settlement, Post review.

3. Reviews - After repayment or after 3rd extension expiry -> Rate borrower. Negative reviews pinned until repayment. Resolved when borrower pays later.

4. Reliability Stars (Trust Score)

Reliability % (12 months) =

$$(\text{on-time repayments} + \leq 7\text{-day late repayments} + \text{resolved-after-negative}) / (\text{all settled} + \text{overdue/unresolved}) * 100$$

Mapping:

- 90-100% -> 5 stars
- 75-89% -> 4 stars
- 60-74% -> 3 stars
- 40-59% -> 2 stars
- 0-39% -> 1 star

Rules:

- If < 2 completed contracts -> 'Reliability: New - no history yet.'
- Reliability + pinned negatives visible only to lender.

5. Contract Status Lifecycle

- REQUESTED -> ACTIVE -> DUE -> SETTLE_PENDING -> SETTLED -> REJECTED

6. Validation Rules

- Amount >= Rs.100
- Due Date >= 48h and <= 90 days
- Lender Phone must match +91 format

- No more than 1 active request per borrower-lender pair

7. Seed Demo Data

Borrower A <-> Lender L1:

- 1 Active (7 days due)
- 1 Due (2 days overdue)
- 1 Settled with positive review

Borrower B <-> Lender L1:

- 1 Active with 2 extensions
- 1 unresolved negative review

Borrower A reliability ~ 90% (5 stars)

Borrower B reliability ~ 67% (3 stars + pinned negative)

8. Non-Functional Requirements

- Mobile-first UI
- Data persistence: LocalStorage
- Privacy: Reliability visible only in lender request context

9. Success Criteria for QA

- Borrower creates -> Lender sees request
- Lender accepts -> Borrower sees Active
- Borrower settles -> Lender approves -> Settled
- Reliability recomputes on settlement/review
- Extensions capped at 3, then Final Extension banner

- Validation errors correct for amount, due date, phone
- Pinned negatives persist until repayment resolved
